Steel type: Case hardening steels

Wire rod used in automotive engineering , designed to use with the case hardening technique in which the metal surface is reinforced by the adding of a fine layer at the top of the material more durable. Case hardening steel is normally used to increase the object life.

Tough core and a hard case are the desired attributes of case-hardened steel components. This combination of properties provides wear resistance and fatigue strength at the surface, and impact strength in the core. It is achieved by carburizing the component's surface, then quenching and tempering the part. Carburized components include gears of all kind, camshafts, universal joints, driving pinions, link components, axles and arbours. All these components must resist wear and fatigue, have inherent toughness, and still be machinable.

**3100 kg or 2600 kg aprox**. and half coils packed together of 1650 kg or 1300 kg aprox. Each coil tied minimum with four strips

## Stelmor line (rod sizes from 5.5 up to 24.0 mm)

Coil weight (kg) aprox.	Coil length (mm) aprox.	Inner diameter (mm) aprox.	Outer diameter (mm) aprox.
2600	1800	800	1250
3100	2000	800	1250

Note: when cutting the coil ties, the length can be increased significantly.

Stelmor line: Half coils				
Coil weight (kg) aprox.	Coil length (mm) aprox.	Inner diameter (mm) aprox.	Outer diameter (mm) aprox.	
1300	900	800	1250	
1550	1000	800	1250	

Note: half coils are delivered in bundles of two coils packed togeter

Hot coiling line (rod sizes from 25.0 up to 52.0 mm)				
Coil weight (kg) aprox.	Coil length (mm) aprox.	Inner diameter (mm) aprox.	Outer diameter (mm) aprox.	
2600	1700	880	1300	
3100	1800	880	1300	

Note: when cutting the coil ties, the length should not have a significant increase. Other coil weights could be made, if customer need
